### **DETAILED ACTION**

1. It is noted that this application has been transferred to Examiner Luong T. Nguyen, Art Unit 2612.
2. The Examiner apologizes for delaying the response to the Supplemental Appeal Brief filed on 09/08/2003.

### ***Allowable Subject Matter***

3. Claims 1-12 are allowed.

The following is an examiner's statement of reasons for allowance:

Regarding claims 1 and 7, the Examiner agrees with the Applicant's Argument that Anderson et al. (US 5,963,255) fails to specifically disclose an electronic camera comprising wherein the system controller controls displaying on said monitor and charging of said capacitor such that, when the amount of electric charge remaining in said battery is below said predetermined value, display of the image data and charging of the capacitor are not simultaneously performed and an operation of displaying the image data on the monitor and recording the image data on a recording medium is completed before an operation of charging the capacitor occurs so that the image data will be preserved on the medium should the battery voltage, as a result of the charging operation, decrease below a level at which the camera would record the image, wherein the image data is displayed on the monitor after the image has been recorded but before the capacitor has begun charging such that, through display of the image data, a user is informed that the image data has been recorded on the medium.

Art Unit: 2612

Claims 2-6 are allowable for the reason given in claim 1.

Claims 8-10 are allowable for the reason given in claim 7.

Regarding claim 11, the Examiner agrees with the Applicant's Argument that Anderson et al. (US 5,963,255) fails to specifically disclose an electronic camera comprising wherein the system controller determines whether a remaining amount of electric charge in the battery is below a predetermined value, and, if the remaining amount of the charge is below the predetermined value, does not permit displaying said monitor and charging of said capacitor to occur simultaneously, such that the system controller prevents the capacitor from being charged while the monitor is displaying the image data when one screen of the image data is being recorded on the recording medium, and controls the monitor to be inoperative while said capacitor is being charged after one screen of said image data has been completely recorded on the recording medium so that the image data will be preserved on the medium should the battery voltage, as a result of the charging operation, decrease below a level at which the camera would record the image, wherein the image data is displayed on the monitor after the image has been recorded but before the capacitor has begun charging such that, through display of the image data, a user is informed that the image data has been recorded on the medium.

Claim 12 is allowable for the reason given in claim 11.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
